

Honorlock Overview

What is Honorlock?

Honorlock is a remote proctoring service that creates a fair testing environment for all students by protecting exams and academic integrity.

How Does Honorlock Work?

Honorlock's remote proctoring services works directly within Blackboard and uses AI to monitor each student's online exam session and alerts a live, US-based proctor if any academic dishonesty is detected. The proctor can then use an analysis window to review the situation before entering the exam session via chat-box in real-time to address the situation.

Honorlock keeps the human touch while delivering a much less intimidating and noninvasive proctored testing experience for the student.
